WHY CREATE TIFF WITH PDF CREATOR PLUS?

➢ Visually combine documents from different applications into a single TIFF image file.
➢ [Drag and drop PDF files](#) to quickly convert them to TIFF images.
➢ TIFF is a widely adopted standard for faxing and archiving documents and is viewable almost everywhere without downloading special software.
➢ Includes page annotation tools for adding text, shapes, or images to your pages before creating your TIFF image.
➢ More than just TIFF, [PDF Creator Plus can also create TIFF](#), JPEG, PNG, and BMP images.
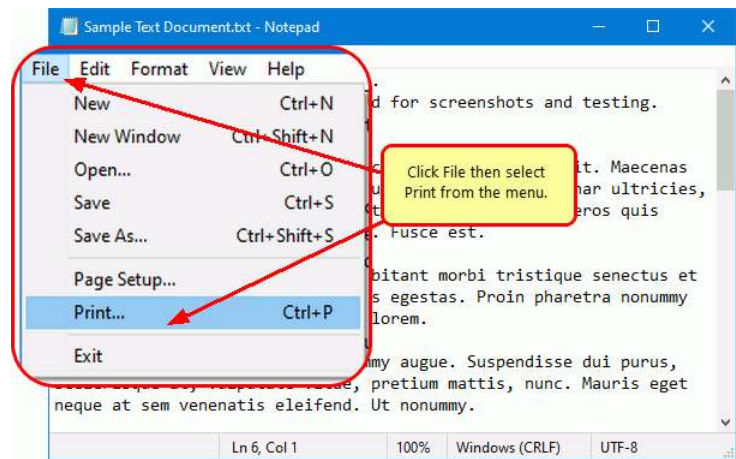

STEPS FOR CONVERTING TO TIFF

1. [Download and install a free trial](#) to try it out, or [install and activate your purchased copy](#). The setup program will install the **PDF Creator Plus app** and **PDF Creator Plus 8** virtual printer to your computer.
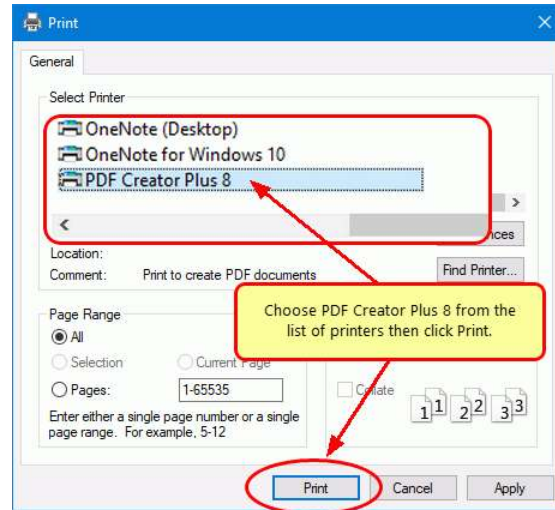

PDF Creator Plus can convert to JPEG images by simply printing any document to the **PDF Creator Plus 8** virtual printer instead of your regular printer.

2. Open your document in its native application. For example, if it's a text file, open it in *Notepad*, as shown here. You would open a Word document in Microsoft Word, a PDF file in Adobe Reader, and so on. Then, select **File – Print** from the application menu.

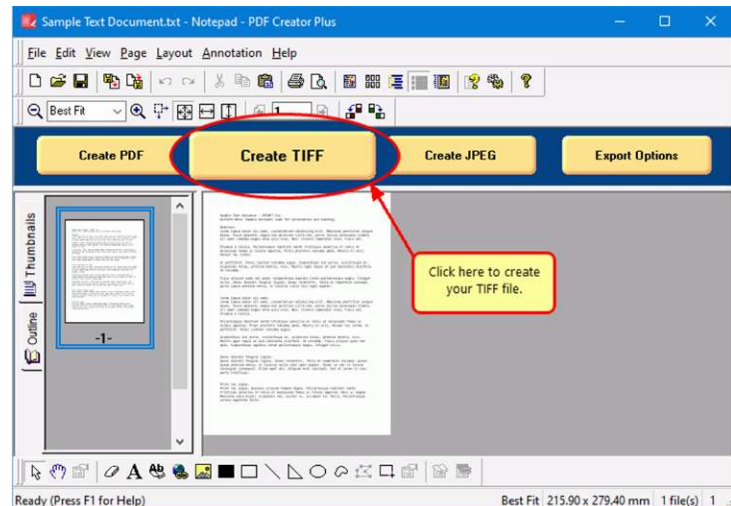

3. In the **Print** dialog, select **PDF Creator Plus 8** from the list of printers and then click **Print**.

4. The **PDF Creator Plus 8** printer sends your printed document to the **PDF Creator Plus app**. In the app, you can move or delete pages. There are also tools to mark up pages with text, shape, and image annotations.
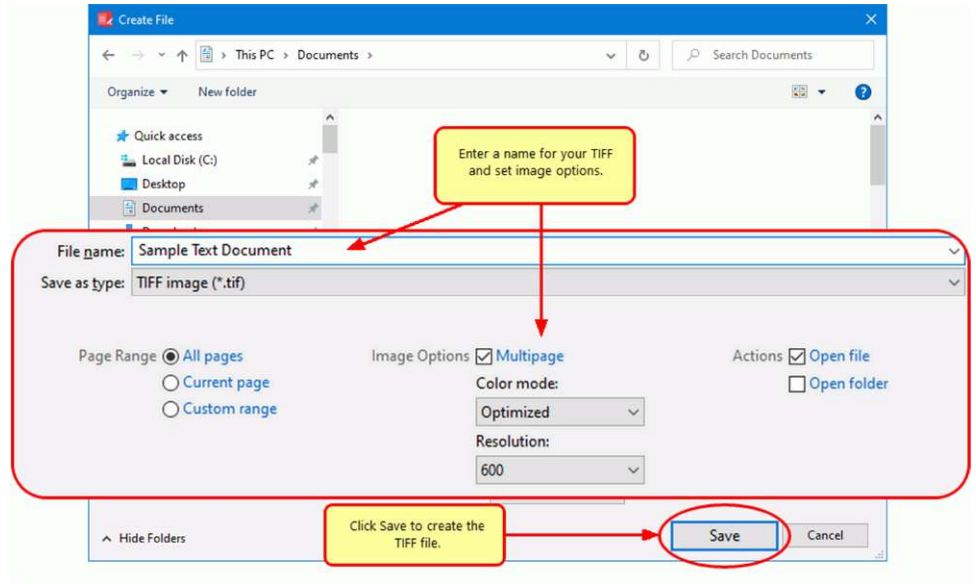

You now have two options: create your TIFF or add more pages by printing additional documents from Word and other apps.

After you have collected all your pages, click the **Create TIFF** button to convert to TIFF now.

5. In the **Create File** dialog, edit the name for your new TIFF image and choose where to save it. Next, choose options for your TIFF image:

    a. Select **TIFF Image (*.tif)** as the *Save as type*.

    b. For a single TIFF file containing all pages, tick the **Multipage** option. When not checked, each page becomes a separate TIFF image.

    c. Choose a color mode for your TIFF image. *Optimized* creates a TIFF with the least amount of color needed. Other choices are *Full Color*, *Greyscale*, and *Monochrome (Black and white)*.

    d. Next, choose the *Resolution* for your image. Higher resolutions create better quality images, but also larger images.

    e. Lastly, click the **Save** button to create your TIFF.

6. A progress dialog displays as your TIFF image, or images, are created. If you wish to change the TIFF, click the Cancel button to halt the process. Make any desired adjustments and start again.

If you had unchecked the multipage option, PDF Creator Plus saves a separate TIFF image for each page in your document. A sequential numbering sequence names each image by appending a suffix of _0001, _0002, etc. to each image name.
